Position junior researcher

Scientific Degree none

Scientific life

2022 - presently Researcher and member at the Africa Research Institute

Research Field The research focuses on the social, environmental, and economic factors influencing food and nutrition security, with particular attention to vulnerable regions of Sub-Saharan Africa. Empirical investigations are primarily conducted in the Democratic Republic of the Congo and the Lake Bunyonyi region of Uganda. Using an interdisciplinary approach, the studies examine the sustainability of food systems, the vulnerability of production chains, and the adaptive capacity of local communities. The aim is to support the development of complex models and intervention strategies that enhance food security under changing environmental and social conditions.
